

You will need to add dependencies for Jetpack Compose, Room Database, and ViewModel in your Android Studio project.

Kotlin

```
dependencies {  
    // Compose  
    implementation("androidx.compose.ui:ui:1.5.0")  
    implementation("androidx.compose.material3:material3:1.1.1")  
  
    // ViewModel  
    implementation("androidx.lifecycle:lifecycle-viewmodel-compose:2.6.1")  
  
    // Room Database  
    val room_version = "2.5.2"  
    implementation("androidx.room:room-runtime:$room_version")  
    implementation("androidx.room:room-ktx:$room_version")  
    ksp("androidx.room:room-compiler:$room_version") // Use KAPT if not  
using KSP  
}
```
